Location: Ireland

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience designing and delivering Java-based, cloud-native backend systems using Spring Boot, RESTful APIs, and Oracle SQL. Proven track record redesigning microservices for 2x throughput gains and building automated data pipelines in enterprise environments. Skilled in establishing team-wide testing standards, CI/CD pipelines, and Agile delivery, with hands-on experience in Kubernetes and AWS.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, Bash, SQL, PL/SQL, C, C++
Backend Frameworks: Spring Boot, Spring Framework, Spring Cloud Gateway, Node.js, Express.js, Django REST Framework
Frontend Technologies: React.js, Redux, Lit.js, HTML5, CSS3, Responsive Design
Databases: Oracle, PostgreSQL, MySQL, MongoDB, Cassandra, AWS RDS, SQL Server
Streaming & Messaging: Apache Kafka, Avro, Apicurio Schema Registry, JMS
Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, DynamoDB, Route 53, API Gateway, ECS, EKS), Docker, Kubernetes, Jenkins, GitHub Actions, Spinnaker, CI/CD
Observability: Prometheus, Grafana, Datadog, Elasticsearch, Kibana
Testing: JUnit, Mockito, Jest, Mocha, Unit Testing, Integration Testing, ATDD
Tools: Git, Gerrit, GitHub Copilot, Postman, Jira, Linux, Shell Scripting
Methodologies: Agile, Scrum, Microservices Architecture, API Design, System Design, Code Review, DevOps

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Fidelity Investments

July 2026 – Present

Galway, Ireland

- Responsible for the Portfolio Construction Service, contributing to the development, maintenance, and delivery of software solutions within the platform
- Upgraded Node.js to version 24 across multiple UI applications, ensuring compatibility with existing applications and development workflows

Software Engineer

Ericsson

October 2024 – July 2026

Athlone, Ireland (Hybrid)

- Own and operate 3 mission-critical microservices (SFTP File Transfer, Configurator, RAN Parser) within EIAP, driving end-to-end PM counter data ingestion and schema management for telecom network nodes
- Redesigned SFTP File Transfer microservice architecture, API contracts, and data flow patterns, doubling throughput from 77/sec to 152/sec and cutting processing time from 12 to 7 minutes through connection pooling, asynchronous processing, and batch message handling
- Led proof of concept for Configurator microservice to onboard R6000 Transport Node PM counters, building an automated pipeline to parse Excel specifications, generate AVDL schemas, convert to Avro, and register to an Apicurio-based Schema Registry — eliminating manual schema onboarding
- Built Kafka-based streaming pipelines across distributed microservices, enabling real-time Avro-encoded message processing and reliable file transfers between ENM, MinIO, and data catalog systems
- Developed and deployed rApps (RAN Applications) in Python on Kubernetes, authoring automated CSAR package generation scripts in Bash and Python for deployment validation and PM counter data consumption testing
- Extended the EIAP SDK portal with new interfaces using JavaScript (Lit.js), enabling developers to discover, consume, and transition across PM counter data types and schema versions for telecom network nodes
- Established team-wide testing standards using JUnit and Mockito, driving 90%+ code coverage across 3 microservices through rigorous code reviews and adherence to best practices
- Diagnosed and resolved production performance bottlenecks using Prometheus, Grafana, Elasticsearch, and Kibana, managing deployment workflows and rollbacks via Spinnaker
- Mentored junior developers and led knowledge-sharing sessions on microservices architecture, design patterns, and debugging techniques, accelerating team onboarding and improving development practices

Software Developer

Stibo Systems

September 2021 – August 2023

Bangalore, India (Hybrid)

- Developed backend features for Enterprise Master Data Management (MDM) platform using Java and Spring Boot, building and maintaining RESTful web services for customer integrations

- Created React.js widget for large file uploads implementing chunking mechanism, progress tracking, and server-side reassembly, achieving 25-second average upload time for 1GB files
- Migrated private cloud infrastructure to SaaS model using Cassandra, AWS cloud services, and Docker containerization, resulting in 30% cost reduction and improved system performance
- Integrated Apache Kafka for near real-time data streaming and processing, reducing data latency by 35% and improving overall data quality across systems
- Established unit testing standards using Jest and JUnit, conducted code reviews, and contributed to Agile sprint ceremonies and CI/CD pipeline improvements

Associate Consultant

July 2019 – September 2021

Oracle Financial Services Software

Bangalore, India (Onsite)

- Designed and built bill payment system using Java Messaging Service (JMS) and Spring Framework, processing 10,000+ daily transactions with 99.9% uptime
- Optimized payment processing flow reducing transaction time by 20% through code optimization and Oracle database query tuning, improving customer satisfaction by 15%
- Wrote complex SQL queries, stored procedures, and PL/SQL scripts for data analysis, reporting, and debugging production issues in Oracle and SQL Server databases
- Managed production support as part of RTB Team, troubleshooting technical issues, monitoring system alerts, coordinating with cross-functional teams, and performing root cause analysis

EDUCATION

Trinity College Dublin

Dublin, Ireland

Master of Science in Computer Science, GPA: 3.8/4.0

September 2023 – August 2024

- Specialization: Intelligent Systems (Artificial Intelligence, Machine Learning, Distributed Systems, Software Engineering)

BMS College of Engineering

Bangalore, India

Bachelor of Engineering in Computer Engineering, First Class with Distinction (8.7/10 CGPA)

August 2015 – July 2019

- Relevant Coursework: Data Structures & Algorithms, Web Development, Database Management Systems, Computer Networks, Operating Systems, Software Engineering

PROJECTS

Real-Time Order Processing Platform | *Java, Spring Boot, Apache Kafka, React.js, PostgreSQL, Redis, Docker, Kubernetes* Personal Project

- Architected an event-driven microservices platform (Order, Inventory, Payment, Notification services) using Spring Boot and Apache Kafka, processing orders asynchronously with Avro-serialized messages and schema validation
- Implemented API Gateway with Spring Cloud Gateway for routing, rate limiting, and JWT-based authentication across all microservices
- Built React.js dashboard with real-time order tracking using WebSocket connections, displaying live order status, inventory levels, and processing metrics
- Deployed on Kubernetes with Helm charts, configured horizontal pod autoscaling, health probes, and centralized logging with ELK stack
- Integrated Redis for caching and idempotency handling, PostgreSQL for persistent storage, and implemented Kafka dead-letter queues for fault-tolerant message processing

SavdhanCity Smart City Platform | *React.js, Django, PostgreSQL, RESTful APIs*

Trinity College Dublin

- Developed full-stack decision-support application using React.js, Redux Toolkit, and Python Django REST Framework for city managers to optimize mobility services
- Designed scalable RESTful APIs and implemented backend microservices (Bin Service, Bus Service, Air Quality Service) with comprehensive CRUD operations
- Built frontend components including authentication system, dashboard views, and data visualization modules with responsive design

CERTIFICATIONS

DEV250 JavaScript Business Rules - STIBO Systems, Aarhus, Denmark

Demonstrated understanding of JavaScript SDK and business rules scripting
